Summary

Sales operations specialist at Nokia. Builds the sales reporting, data models, and internal tools for global sales and finance teams, and owns each one through rollout and support. Co-founder & CTO of A Darle 20, a live two-sided marketplace (1,400+ users, 2,100+ bookings) built solo with an AI-agent-heavy workflow in Claude Code. Looking for a RevOps or GTM systems role at an AI-forward company.

Experience

Nokia — Toronto, ON
Sales operations specialist (internal tools & automation) — Jun 2024 – Present

- Migrated all sales reporting from Salesforce Analytics to Power BI for 150+ users. Owned the data model, the transformation logic (SQL/DAX), and the global stakeholder rollout end to end.
- Built a self-serve quarterly executive reporting app (Power Apps) used by 80+ stakeholders across 7 regions. It eliminated a manual collection process that consumed one finance analyst's entire workday, every day of quarter-end close.
- Own every tool through its full lifecycle: turn vague requests from sales and finance leadership into scoped requirements, then run executive demos, global rollout, user support, and iteration across time zones.

Workforce management specialist — Oct 2022 – Jun 2024

- Owned headcount reporting and forecasting for a 3,000–4,000-person organization.
- Identified $1.2M in real-estate cost savings by analyzing lab and facility utilization data.

A Darle 20 (“Let’s Go 20”) — adarle20.com — Toronto, ON
Co-founder & CTO (solo developer) — Aug 2025 – Present · launched Mar 2026

- Grew to 1,400+ registered users, 127 hosts, and 2,100+ bookings in the first four months after launch, with 200–400 unique visitors daily.
- Instrumented the funnel end to end (bookings, conversion, cancellations, refunds, host activation) and use the data to steer product and monetization decisions.
- Integrated Stripe Connect for host payouts, platform fees, and OXXO cash payments, designing payment flows for a Mexican customer base with low card penetration, with automated refunds and transactional email.
- Architected and shipped the entire marketplace as solo developer (TypeScript, Next.js, Supabase/PostgreSQL, Stripe Connect, Vercel) with an AI-agent-heavy workflow in Claude Code, keeping hands-on ownership of architecture, code review, and release.
- Run an autonomous multi-agent code-audit workflow (Claude Code) that reviews, refactors, and regression-tests the production codebase.
- Built the technology behind a flagship 251-player event at a 19,000-attendee convention, rated 4.96/5 by attendees.

Freelance web development & consulting — Remote
Self-employed — May 2019 – Oct 2022

- Advised a startup client on web-development strategy, saving $100k+ in agency fees.
- Built custom client solutions: an integrated web ordering experience and an affiliate-marketing site.
- Resolved a client security breach and restored their domains from email blacklists.

Dell Technologies — Austin, TX
Marketing intern — May 2018 – Aug 2018

- Built a propensity model (Azure ML) on Dell's historical customer database to find cross-sell targets for a high-margin software product. It surfaced ~20,000 qualified accounts, an estimated $129M pipeline (segment-level average deal size).

Education

B.S. in Business Administration — The University of Texas at Dallas — 2016 – 2019
Software Engineering Immersive — General Assembly, Toronto — 2020 – 2021

Technical skills

Sales reporting & data: SQL, data modeling, DAX, Power BI, Salesforce, Excel/VBA, forecasting
Internal tools & automation: Power Apps / Power Automate, SharePoint, Python automation, ETL & data workflows
AI-assisted development: Claude Code, Anthropic API, LLM integration & agentic workflows, prompt engineering
Engineering: TypeScript, React, Next.js, Node.js, PostgreSQL, Supabase, Stripe, REST APIs
