Summary

3+ years in operations at Nokia: owned headcount reporting and forecasting for a 3,000–4,000-person organization, then moved to sales operations, taking internal tools from vague request to global rollout and support across time zones. Co-founder & CTO of A Darle 20, a live marketplace: built its payment and refund flows, instrumented its funnel, and built the technology behind a 251-player live event. Looking for a delivery operations role at an AI-forward company.

Experience

Nokia Toronto, ON
Sales operations specialist (internal tools & automation) Jun 2024 – Present

- Own every internal tool through its full lifecycle: turn vague requests from sales and finance leadership into scoped requirements, then run executive demos, global rollout, user support, and iteration across time zones.
- Built the self-serve app (Power Apps) that runs the quarterly executive reporting cadence for 80+ stakeholders across 7 regions. It eliminated a manual collection process that took one finance analyst's entire workday, every day of quarter-end close.
- Migrated all sales reporting from Salesforce Analytics to Power BI for 150+ users, owning the data model, transformation logic (SQL/DAX), and global rollout.

Workforce management specialist Oct 2022 – Jun 2024

- Owned headcount reporting and forecasting for a 3,000–4,000-person organization.
- Identified $1.2M in real-estate cost savings by analyzing lab and facility utilization data.

A Darle 20 (“Let’s Go 20”) — adarle20.com Toronto, ON
Co-founder & CTO (solo developer) Aug 2025 – Present · launched Mar 2026

- Built the technology behind a flagship 251-player event at a 19,000-attendee convention, rated 4.96/5 by attendees; a co-founder ran the event on the ground.
- Integrated Stripe Connect for host payouts, platform fees, and OXXO cash payments, designing payment flows for a Mexican customer base with low card penetration, with automated refunds and transactional email.
- Instrumented the funnel end to end (bookings, conversion, cancellations, refunds, host activation) and use the data to steer product and monetization decisions.
- Grew to 1,400+ registered users, 127 hosts, and 2,100+ bookings in the first four months after launch, with 200–400 unique visitors daily.
- Architected and shipped the entire marketplace as solo developer (TypeScript, Next.js, Supabase/PostgreSQL, Stripe Connect, Vercel) with an AI-agent-heavy workflow in Claude Code; a multi-agent code-audit workflow reviews, refactors, and regression-tests the production codebase.

Freelance web development & consulting Remote
Self-employed May 2019 – Oct 2022

- Advised a startup client on web-development strategy, saving $100k+ in agency fees.
- Built custom client solutions: an integrated web ordering experience and an affiliate-marketing site.

Dell Technologies Austin, TX
Marketing intern May 2018 – Aug 2018

- Built a propensity model (Azure ML) on Dell's historical customer database to find cross-sell targets for a high-margin software product. It surfaced ~20,000 qualified accounts, an estimated $129M pipeline (segment-level average deal size).

Education

B.S. in Business Administration — The University of Texas at Dallas 2016 – 2019
Software Engineering Immersive — General Assembly, Toronto 2020 – 2021

Technical skills
